

Fasoo Data Radar

Unified Approach for Unstructured Data

Discover and Classify
Encrypt and Restrict Access
Trace and Audit

Fasoo Data Radar finds unstructured data, encrypts sensitive data, manages user access to the data, and embeds a unique identifier in each file. Data is always protected and under your control, internally, at third parties, with the ability to trace and expire it anywhere at anytime. Fasoo Data Radar is a unified solution for data security, privacy and compliance.

Unnecessary complexity puts your project at risk and leaves your sensitive data exposed to theft or loss.

CIOs, CISOs, CCOs and CDOs face an urgent need to protect sensitive data and meet increasingly stringent privacy regulations. However, too many projects falter as vendor solutions require an overly complex data discovery and classification process.

Today's solutions leave C-suite execs and their security and IT professionals with little choice. They can either pursue a time consuming, academic approach to catalogue all data for all purposes. Or, rush to deploy today's data loss prevention or behavioral analytic approaches that require "more data about data", complicate classification, and don't actually protect the data, giving a false sense of security.

Fasoo Data Radar is your fastest path to protect sensitive unstructured data and comply with privacy laws

Fasoo Data Radar is different. We don't require complex classification like rules-based solutions that attempt to map all things data and users can and can't do. We find and encrypt sensitive data and restrict unauthorized access from the start so its protected no matter where it travels or how its used. And your data is genuinely protected, not just monitored like other solutions.

Fasoo Data Radar optimizes data discovery and classification and accelerates your project to an enterprise grade data-centric security and privacy program.

Fasoo Data Radar

Fasoo Data Radar unifies our industry leading unstructured data discovery and classification tools with the smart “Pac & Tag” technology. Unlike conventional solutions, our approach encrypts and restrict access at the file-level (Pac) and embeds a unique identifier (Tag) to provide the utmost in data security and privacy controls.

Protect the File

Not only monitor and detect anomalies, Pac protects the data itself.

Unique File Identifier

Tag travels with the file providing deeper traceability than log analysis-based approaches.

Protected Everywhere

Pac travels with the file to endpoints, clouds and other repositories

Persistent Identifier

Tag is inherited by all file derivatives, including copies with different names and formats.

User Access

Pac restricts user access at the file level. You no longer need to manage folder encryption and access.

Remote Expire

You can easily revoke access to all file derivatives and renamed copies wherever they reside.

About Fasoo

Fasoo provides unstructured data security and enterprise content platforms that enable our customers to protect, control, trace and analyze critical business information while enhancing productivity. Fasoo has successfully retained our leadership in the unstructured data security market by deploying enterprise-wide solutions for more than 1,500 organizations globally, securing 2.7 million users. Fasoo is experiencing continuous improvement in its global market position, based on our unique technology, ongoing R&D and strategic approach to comprehensive product capabilities by extending our core security capabilities into content-centric collaboration, behavioral analytics and information security consulting services.
