Unqork: No-code simplicity meets enterprise-grade functionality
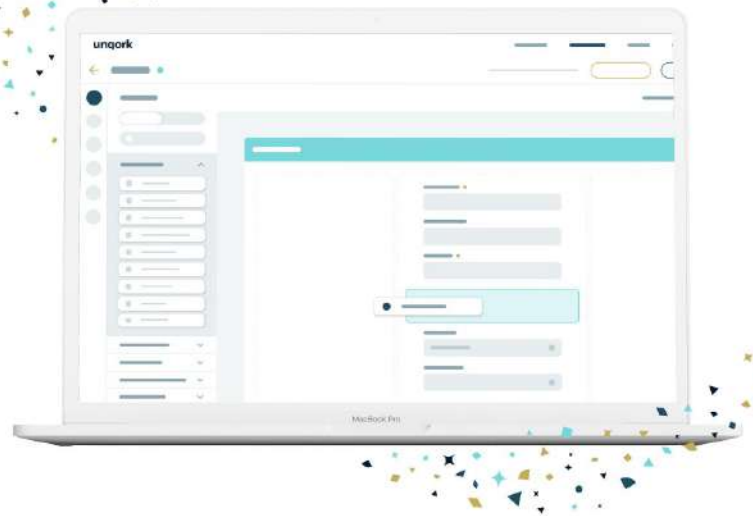

Unlock your organization's competitive advantage

Traditionally, enterprise technology leaders have been forced into a difficult tradeoff: more functionality in your application means greater complexity in your development tools and process. Simple projects like basic websites or spreadsheets can use "drag and drop" tools, but more complex, enterprise-grade software requires a variety of tools, specialized resources, and, most importantly, lots of custom code.

This tradeoff comes at a great cost: the vast majority of large IT projects fail, huge amounts of budget dollars are being spent on legacy maintenance, and hiring skilled engineers is becoming more difficult by the day. When you combine this with an increasing demand from the business it becomes extremely difficult for your organization to deliver. In fact, according to Gartner, demand for new applications now outpaces IT's ability to deliver by 5x.

Unqork doesn't force you into this tradeoff. By combining the simplicity of a no-code environment with the power of true enterprise functionality, Unqork allows you to build complex applications without having to write a single line of code. The result is a fast way to build, deploy, and manage software that just isn't possible with conventional tools.

Today some of the world's largest enterprises are using Unqork to build complex, enterprise-grade applications. Initial builds that used to take months or even years now take weeks, companies are widening their aperture of hiring, and the costs of legacy maintenance is decreasing. And, most importantly, skilled engineers are able to focus on projects that truly drive competitive advantage.

True, no-code functionality

Drag and drop application logic "components" in a variety of ways to build rich application functionality.

- Drag and drop components
- Spreadsheet-like functionality for rules
- Visual data transformation
- Domain and industry-specific templates

Unified toolkit

The entire application stack onto a single platform, move across functionality without having to jump across systems.

- Intuitive front-end
- Seamless integration capabilities
- End-to-end data instrumentation
- Built-in management

Enterprise-grade

Build with the confidence you need to keep data, processes, and users safe and secure.

- Single-tenant, cloud agnostic
- Role-based Access Controls (RBAC)
- SOC 2, Type II, Privacy Shield compliant
- SDLC Tooling
- No version locking due to legacy code

How Unqork transforms your organization

Get to market faster

Build rich functionality much faster than conventional methods by configuring in a completely visual interface.

Reduce legacy maintenance

Maintain applications in a completely visual format, avoiding complex maintenance and time digging into hand-written code.

Make hiring easier

Quickly train generalists to contribute to the development process, widen your aperture of capable talent throughout your organization.

Improve flexibility

Free yourself from the constraints of a rigid data model, store all of your data in a document-based JSON database.

Near-zero management

Unqork completely manages your environment so you and your team can focus on delivering value to your business.

Improve collaboration

Bring requirements owners directly into the development process, resulting in better collaboration and application quality.

Focus specialized talent

Allow specialized engineering resources to focus only on your most complex projects that truly differentiate your business.

Empower your workforce

Avoid the risks of "shadow IT" by training anyone to build applications and participate in the development process.

Conduct robust analytics

Seamlessly move between Unqork and your analytics platform of choice with an analytics-ready BI connector.

Enterprise-grade security

Operate knowing Unqork's compliance, permissions, and encryption meet the highest standards for enterprise security.

About Unqork

Unqork is the industry pioneer no-code enterprise application platform that helps large companies build, deploy, and manage complex applications without writing a single line of code.
