

data.world

The cloud-native data catalog for *all* your people

data.world makes it easy for everyone—not just the “data people”—to get clear, accurate, fast answers to any business question. Our cloud-native enterprise data catalog collects, connects, and aligns data and metadata, creating a unified body of knowledge anyone can find, understand, and use.

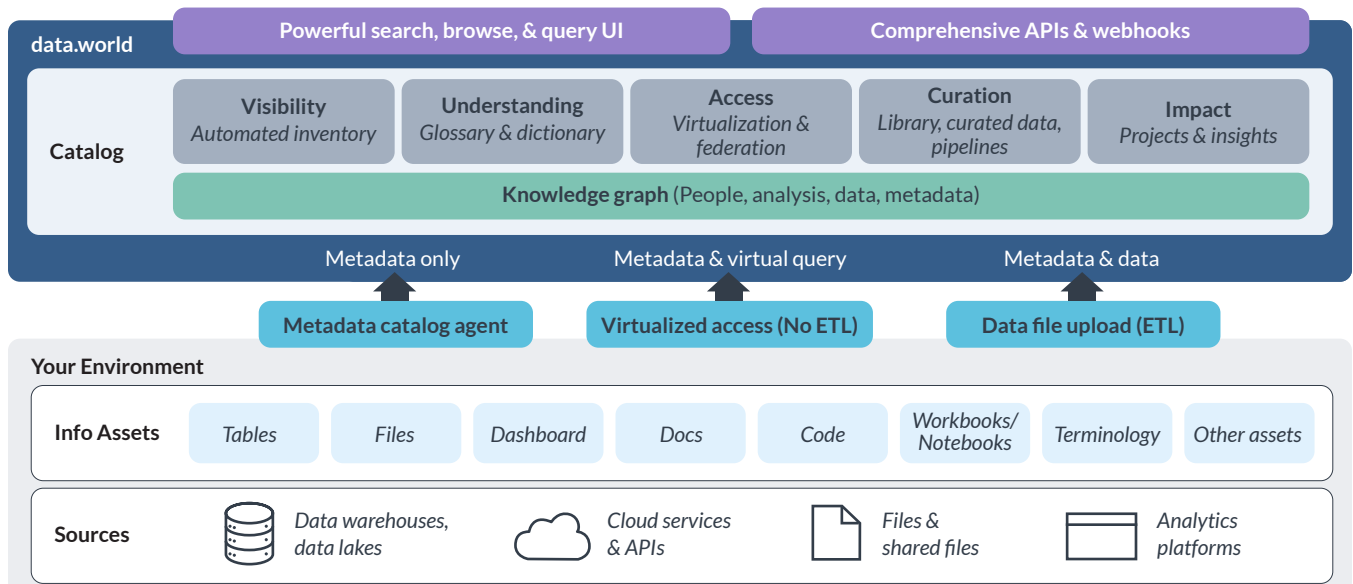

Most catalogs focus strictly on metadata management. We do that too, but we believe a catalog should be so much more. data.world also delivers powerful data management capabilities including virtualized access, cross-platform federated query, self-service analytics, and collaboration to empower your entire workforce with high-quality data.

“By 2021, organizations that offer a curated catalog of internal and external data to diverse users will realize twice the business value from their data and analytics investments than those that do not.”

Gartner “Augmented Data Catalogs: Now an Enterprise Must-Have for Data and Analytics Leaders,” Ehtisham Zaidi, Guido De Simoni, September 2019

KEY CAPABILITIES

- **Cloud-native SaaS** - Fast deployment. Frequent improvements. Scale to thousands of users.
- **Metadata management** - Catalog and understand the meaning of all your data and metadata.
- **Agile governance** - Keep track of all data, metadata, and glossary terms. Request access to critical datasets.
- **Clean, intuitive UX** - A powerful enterprise platform that acts like a consumer-grade application.
- **Data virtualization** - Connect to any source without copying and moving your data.
- **Cross-platform query** - Dig deeper into your data by federating queries across multiple sources and file types.

Make agile governance easy

Start quickly, and scale your team and projects as business needs demand. Our UX features Google-like search, Facebook-like collaboration and discovery, and Amazon-like data fulfillment and governance.

- Tag and classify assets manually or automatically, and certify them for use via approval workflows
- Create and apply business descriptions and technical definitions so everyone understands data in the same way
- Collaborate in real-time with teammates and subject matter experts

Discover the power of data you already have

Inventory, curate, and govern all your data and metadata. Eliminate duplicative, siloed work and assets with a common platform for everyone to contribute value.

- Track team activity and trends, and find relevant content via an active newsfeed
- See the lineage of views, queries, additions, edits, and more
- Continuously map relationships between data assets through a unique, automatically-generated knowledge graph

Reduce your risk

With hefty million-dollar-plus fines for non-compliance, you can't afford to wait on lengthy, costly software installs, upgrades, and patches. Our SaaS data catalog is quick to set up and easy to use so you can inventory and understand all data assets and act on a clear, informed data strategy.
