

Cybersecurity Asset Management Platform

Axonius is the cybersecurity asset management platform that gives organizations a Comprehensive Asset Inventory. We uncover security coverage gaps, and automatically validate and enforce your security policies.

By seamlessly integrating with over 200 security and IT management solutions, Axonius deploys in hours (not weeks) to improve threat and vulnerability management, security operations, incident response, and overall security posture.

SEAMLESS INTEGRATION

The screenshot displays the Axonius web interface. On the left, there's a sidebar with navigation icons. The main area is titled 'Devices' and shows a table with 67 entries. A 'New Query' builder is open, showing a complex query and a 'Show only data:' filter. On the right, an 'Action Library' is visible with various actions like 'Create Incident', 'Run Command', and 'Execute Endpoint Security Agent Action'.

COMPREHENSIVE ASSET INVENTORY

“
There has never been a tool that does what Axonius does, allowing us to tie everything together using simple queries and then putting compliance on autopilot.

– **JEFFREY GARDNER**
SENIOR DIRECTOR OF INFORMATION SECURITY, LANDMARK HEALTH

How it works.

- **DEPLOY AXONIUS**
Axonius is an agentless single virtual appliance and can be deployed either on- premise or in cloud instances.
- **CONNECT ADAPTERS**
Connect to the different solutions you already use with Adapters, pre-built integrations on the Axonius platform.
- **EXAMINE YOUR ASSETS**
Axonius provides a fully unique list of devices and users so you can surface areas of risk and be alerted when policies aren't met.

Key Benefits

REDUCE MEAN TIME TO INVENTORY

Axonius correlates data from all sources to provide an up-to-date inventory of all unique assets. This single source of truth gives security teams a clear, consistent picture of their asset inventory without the need for constant manual audits.

AUTOMATE SECURITY POLICY ENFORCEMENT

The Axonius Security Policy Enforcement Center addresses assets that don't adhere to your security policies. Security enforcement sets can be customized for any condition to notify personnel, enrich data, or remediate incidents automatically.

SEAMLESS DEPLOYMENT AND MANAGEMENT

Axonius is agentless – no endpoint or network agent is needed. Even customers with more than a million devices and more than 50,000 employees still deploy Axonius as a single virtual appliance to get complete visibility into their assets.

Use Cases

ASSET INVENTORY MANAGEMENT

- Continuous discovery and management of all unique assets
- Fully characterized and aggregated data for each asset
- Single view across multicloud and virtual environments

UNMANAGED DEVICE IDENTIFICATION

- Find unmanaged devices, including IoT and connected medical devices
- Identify unauthorized devices on restricted network segments

SECURITY RISK MANAGEMENT

- Find vulnerable devices with missing or malfunctioning agents
- Find exploitable devices missing vulnerability scans and patches
- Identify rogue devices and software

SECURITY POLICY ENFORCEMENT

- Notify the right teams when assets don't meet policies
- Enrich device and user data with third party contextual data sources (i.e. Shodan, Censys, HavelBeenPwned)
- Remediate machines via endpoint security agents or direct commands

Axonius is the cybersecurity asset management platform that lets IT and Security teams see devices for what they are in order to manage and secure all. **Interested in seeing what Axonius can do for your organization?**
