

BitSight Enterprise Analytics

MANAGE CYBER RISK ACROSS CORPORATE STRUCTURES

Get insight into the impact of risk introduced at the organizational group level so that you can identify and prioritize the areas of highest risk concentration.

GAIN VISIBILITY INTO SECURITY PERFORMANCE ACROSS BUSINESS UNITS, SUBSIDIARIES, AND OTHER ORGANIZATIONAL GROUPS

As cyber threats evolve and digital ecosystems expand, knowing where to prioritize cybersecurity investments and resources for the greatest impact can be difficult.

Large enterprises typically consist of multiple distinct organizational groups, including business units, subsidiaries, mergers, acquisitions, and disparate geolocations. Each group has a unique structure, function, and points of digital exposure. This level of complexity often makes it difficult for security and risk leaders to pinpoint where the greatest cyber risk exists across their distributed organization.

BitSight Enterprise Analytics takes the guesswork out of identifying risk concentration throughout and enhances security performance across distributed enterprise groups. The solution helps security and risk leaders simplify security program monitoring, management, and reporting by aligning risk management and communication with the existing business structure. Now you can quickly and easily assess cyber risk exposure across your distributed organization, measure and report on subsidiary security performance with enterprise-wide context, and focus remediation efforts on areas with the greatest impact.

KEY BENEFITS

- ✓ Quickly discover risk exposure across the distributed organization
- ✓ Identify performance gaps in your security program
- ✓ Feel confident you know the cyber risk posture of your entire organization at all times
- ✓ Establish security performance targets and focused improvement plans
- ✓ More effectively allocate security resources

BITSIGHT[®]

KEY CAPABILITIES

As part of the BitSight Security Performance Management suite of solutions, BitSight Enterprise Analytics helps security and risk leaders quickly gain insight into risk introduced into the organization by mergers, acquisitions, subsidiaries, and business units. With this insight, you can quickly identify where the highest areas of risk are concentrated, introduce cyber risk reduction programs, and drive governance and action throughout a large distributed organization.

ALIGN SECURITY PROGRAMS TO THE OVERALL BUSINESS:

Align BitSight with organizational structures including business units, geographies, and subsidiaries.

MONITOR PERFORMANCE ACROSS A COMPLEX ORGANIZATION:

Assess relative security performance at a glance across multiple organization groups that make up your enterprise.

QUICKLY DISCOVER GROUP-BASED PERFORMANCE DEFICIENCIES:

Use real-time, meaningful, and objective data and metrics to uncover the factors within each enterprise group that most significantly impact overall security performance, such as unpatched systems, insecure access points, and existing malware infections.

ENFORCE SECURITY CONTROLS:

Drive action with an automatically created subsidiary and risk vector action plan, which includes the rating impact on the parent from subsidiary improvements.

ALLOCATE SECURITY RESOURCES EFFECTIVELY:

Prioritize investments and distribute limited resources to the areas that can have the greatest impact on security performance.

CREATE INFORMED IMPROVEMENT PLANS:

Use BitSight Enterprise Analytics alongside BitSight Peer Analytics and BitSight Forecasting to set performance targets and create improvement plans by enterprise group.

REPORT MORE IMPACTFULLY TO THE BOARD:

Measure and manage the security performance of different units within your corporate structure and confidently report outcomes to senior executives and the board.
